Selected in 1998 by Michael Yanny, Star Power™ Juniper is suspected to be a hybrid between *Juniperus communis* and *Juniperus chinensis*.

Star Power™ is a very fast growing cultivar with eye-catching, bluish-green, star-like foliage. It is the fastest growing upright juniper we have encountered at Johnson's Nursery. 5 year old Star Power™ plants are 6-7' tall, compared to Iowa, Ames, Canaerti and Hook's #6, which are 4-5' at that same age.

Star Power™ has excellent density, requires minimal shearing, and is a great screening plant where deer can be troublesome. The star-like foliage also gives the plant a fresh, rich texture.
